

FIG. S1 – Distribution of quantitative morphological characters according to published ranges. Eight quantitative characters (Appendix 2) are plotted for all species having published data. Values reported as ranges are depicted with solid horizontal lines, with range extremes as dotted lines. Reported averages or single data points are shown with ‘x’ symbols, and unspecified maxima or minima (e.g., “up to x cm”) are shown with parentheses connected to dotted lines. One or more arbitrary break points per character (Appendix 1) are indicated as vertical lines.
